Infinite Green Energy has partnered with WA fuel distributor Refuel Australia, moving a step closer towards delivering the State's first commercial-scale renewable hydrogen.

Perth-based IGE – formerly known as Infinite Blue Energy – said on Wednesday it would work with Refuel Australia to construct a hydrogen refuelling station at its MEG HP1 project in Northam.

IGE chief executive Stephen Gauld said the partnership represented a significant milestone for the company.

IGE said it had also secured additional land that would provide the option to double production of renewable energy to 8 tonnes a day.
